Zimmerman
LIVE EDGE

Live Edge Art. . .We preserve the wood as it grew in nature with its unique grain patterns and compelling variations

Repurposing...

Milling...

Drying...

The logs are milled into slabs and air-dried for 1-2 years. The slabs are then kiln dried and prepared for our wood artisans to then process them into beautiful tabletop slabs

...Finished Slab.

Table Top Selections

Create a "One of a Kind" Table!

Zimmerman Chair creates live edge tabletops that come from local tree services. Each live edge slab is individually unique and preserved in its natural state to create some stunning and compelling works of art.

Each slab will be different in character and size. There are multiple wood species used including Walnut, Maple, Cherry, Oak, Hickory,Elm, Box Elder, Locust, Sycamore, Beech, and more! "Each slab is one of a kind and has its own serial number - the first four digits are the slab identifier and the last section is the length in inches."

Use the QR codes to check our current inventory on our website which is constantly being updated.
